Summary

Computer Science undergraduate specializing in Artificial Intelligence & Data Science with strong foundations in DSA, OOP, DBMS, and System Design. Experienced in building AI/ML and full-stack applications using Python, React, MongoDB, OpenCV, and YOLOv8, with exposure to AWS, Docker, Linux, Git, and CI/CD.

Education

Bachelor of Technology in Artificial Intelligence & Data Science

2023 - Present

G.L. Bajaj Institute Of Technology and Management, Greater Noida

CGPA : 7.5

Senior Secondary(XII)

2022

Nitishwar Singh School , Muzaffarpur ,Bihar

88%

Secondary(X)

2020

Primus Public School , Muzaffarpur , Bihar

85%

Technical Skills

- **Languages:** C++, Python, JavaScript, SQL
- **Frontend:** React.js, HTML, CSS, Bootstrap
- **Databases:** MongoDB, MySQL
- **AI/ML:** Machine Learning, TensorFlow, OpenCV, YOLOv8, CNN, Transfer Learning
- **Cloud & DevOps:** AWS, Docker, CI/CD Pipelines
- **Operating Systems & Tools:** Linux, Git, GitHub
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Internship

AICTE Virtual Internship - Machine Learning

- Built a CNN-based multi-class image classification system using MobileNetV2 transfer learning to classify animal species from images.
- Implemented image preprocessing, data augmentation, model training, validation, and evaluation using TensorFlow/Keras.
- Developed an end-to-end inference pipeline using OpenCV with confidence-based predictions for unseen images.

Projects

CrowdVision

- Built a real-time crowd monitoring system using YOLOv8 and OpenCV for person detection and crowd-density analysis.
- Developed a risk-analysis pipeline with threshold-based alerts, density heatmaps, and real-time crowd statistics for identifying high-risk situations.
- Integrated the computer vision pipeline with a Flask-based web application, supporting live camera feeds and uploaded images/videos.

Agrichain

- Built a Transparent agricultural supply-chain platform to improve transparency and traceability between farmers, distributors, and buyers.
- Integrated real-time mandi price data using government APIs and developed backend services using Node.js, Express.js, and MongoDB.
- Developed crop management and price-tracking workflows with a Next.js frontend and REST API-based architecture.

Achievements

- Solved 600+ DSA problems on LeetCode, strengthening problem-solving skills across Arrays , Trees , Dynamic Programming and Graphs
- Selected for the Sandip University Hackathon, developing CrowdVision AI, a real-time AI-based crowd monitoring solution.
- Qualified the internal round of Smart India Hackathon (SIH) with AgriChain, a technology-driven agricultural supply-chain solution.
